

TOGUE POND

T15 R9, Aroostook Co.
U.S.G.S. Gardner Pond, Maine (7 1/2')

Fishes

Landlocked salmon	Blacknose dace
Lake trout (togue)	Pearl dace
Brook trout	Longnose sucker
Rainbow smelt	White sucker
Yellow perch	Hornpout (bullhead)
Minnnows	Burbot (cusk)
Lake chub	Threespine stickleback
Common shiner	Slimy sculpin
Blacknose shiner	

Physical Characteristics

Area - 388 acres
Average depth - 43 feet
Maximum depth - 85 feet

Temperatures:
Surface - 70⁰F
85 feet - 45⁰F

Principal fisheries: Landlocked salmon, lake trout, brook trout

Water quality characteristics of Togue Pond are considered excellent for coldwater gamefish. Abundant dissolved oxygen is available at all depths in the deep, cold water in the warmest part of the summer.

Lake trout and brook trout populations are maintained by natural spawning within the lake. The salmon fishery is dependent on annual stockings of hatchery fish.

Conservative fishing regulations have been implemented to maintain and enhance the sport fishery.

Togue Pond is one of many ponds situated in close proximity in T15 R9, a township owned by the State of Maine. Two-wheel drive access to the lake is via improved gravel roads. An unimproved boat launch leads from the gravel road.
